EDUCATION

Bachelor of Science, Mechanical Engineering (BSME)

Montana State University, Bozeman, MT

August 2022 - December 2026

3.56 GPA

Certificate in CNC Machining

Montana State University, Bozeman, MT

August 2021 - May 2022

3.61 GPA

Awards: Dean's List - Fall 2021, Spring 2024, Fall 2024

TECHNICAL SKILLS

CAD / CAM / Simulation: SOLIDWORKS, Siemens NX, Fusion 360, Vericut, KiCAD

Programming: Python, C++/Arduino, MATLAB, LabVIEW, HTML/CSS

Machine Control: G-code, Siemens SINUMERIK 840D, Fanuc Macro B, CNC probing routines

Manufacturing: CNC milling/turning, DFM, GD&T, 3D printing, soldering, control enclosure wiring

Data / Business Tools: Excel, Minitab, SAP, Microsoft Office

Languages: English (native), Polish (fluent)

PROFESSIONAL EXPERIENCE

Janicki Industries, Hamilton, WA, Engineering Intern

June 2026 - August 2026

- Converted a machine health-check probing routine from Fanuc Macro B to Siemens SINUMERIK 840D for two 5-axis machines, structured as a main/subprogram with 4 check modes; validated in Vericut and on-machine as a faster alternative to a ~1 hr test-block check that tied up a pallet and CMM time.
- Designed and built a 6-module Python tool that parses, analyzes, and reports a multi-system tool audit across Vericut, Tool Manager, SAP, and Stellar, flagging 45 assembly dimensional discrepancies, 15 missing tools, and 15 exact/near-duplicate tools across ~120 assembled tools.
- Created standardized audit templates for assembled tools, tool holding, and cutters, validated against manufacturer data, establishing a repeatable format for automated analysis and future tool-building standards.
- Reprogrammed a production probing sequence in NX to hold rotary orientation fixed, reducing tolerance stacking and variability before the finishing operation.

Advanced Innovation, Inc., Belgrade, MT, CNC Machinist

March 2022 - Present

- Operate up to 8 CNC mills simultaneously to manufacture precision components within tight tolerances.
- Conduct quality inspections with precision measurement tools and troubleshoot equipment to reduce downtime.
- Train new employees on CNC operation.

Proof, Belgrade, MT, CNC Machinist / Assembly

January 2023 - July 2024

- Designed and 3D-printed calibration fixtures for an automated CNC-loading robot arm, improving accuracy and reducing setup time by 30%.
- Built custom enclosures and fixtures for a laser engraver, improving operator safety and reducing process time by 45%.

Hondo Garage, Belgrade, MT, CNC Machinist / Assembly / Media Manager

January 2023 - July 2024

- Ran CNC mills for prototype and production runs, designed 3D-printed fixtures, and shot product photo/video.

PROJECTS

Automated T-Shirt Stacker (Senior Capstone, Team Project)

2026 - Present

- Designing an automated garment stacker for commercial printing targeting 200 garments/hour, using a bidirectional shuttle, IR break-beam detection, Hall-effect positioning, and a self-lowering stack platform.
- Specified control electronics (Arduino Mega, stepper drivers, braked NEMA 34 with planetary gearbox, MOSFET/optocoupler I/O), designed the NEMA 1 enclosure wiring and wire schedule, and coordinated the BOM across ~23 vendors.

Automated Garden Watering System (Team Project)

May 2025 - June 2025

- Led design of an automated irrigation prototype with stepper-controlled flow distribution through a modular multi-zone water hub, integrating microcontrollers, a real-time clock, and environmental sensors.
- Implemented soil moisture, temperature, and humidity feedback with fan-controlled airflow and scheduled grow lights for a low-maintenance indoor growing system.

Hobby Rocketry Components (Independent Project)

January 2024 - March 2024

- Designed and 3D-printed fin cans and a fly-away rail guide; stress-tested PLA, PETG, and carbon fiber nylon.
